

## ITT632 GROUP PROJECT

---

Mobile cloud computing (MCC) is a method of using cloud technology to deliver mobile apps. Complex mobile apps today perform tasks such as authentication, location-aware functions, and providing targeted content and communication for end users. Modern customers expect the convenience of accessing a company's website and applications remotely from anywhere and at any time. Organizations use mobile cloud computing applications to meet this expectation efficiently and cost-effectively. They run complex workloads on cloud resources so that users are not limited by their device capacity or operating system.

Based on the definition above, you are required to develop a mobile application with cloud integration according to the specification below:

- a. MUST be a mobile application (Android/iOS)
- b. Integration with at least **THREE (3)** third-party cloud computing services (Google/Amazon/etc.)
- c. Integration with at least **ONE (1)** in-house web service.

The content of your report is as follows:

- 1. Cover page (name, student id, group, title)
- 2. Table of contents
- 3. Introduction
- 4. Cloud services used (what and why)
- 5. Design (architecture/database/services/UI/etc.)
- 6. Screenshots of your application
- 7. Conclusion, limitation, and recommendation
- 8. References
- 9. Link to Video presentation.

You'll also need to prepare a video presentation. The length of the video presentation should not exceed 15 minutes, and you'll need to share a link together with the report.

**Submission Dateline: Week 15**
